

NICE TO BEE

Nice to Bee is a lush tapestry of native plants carefully chosen to attract and support local pollinators. By showcasing the beauty and importance of biodiversity, the garden becomes a microcosm of the larger ecosystem it seeks to preserve.

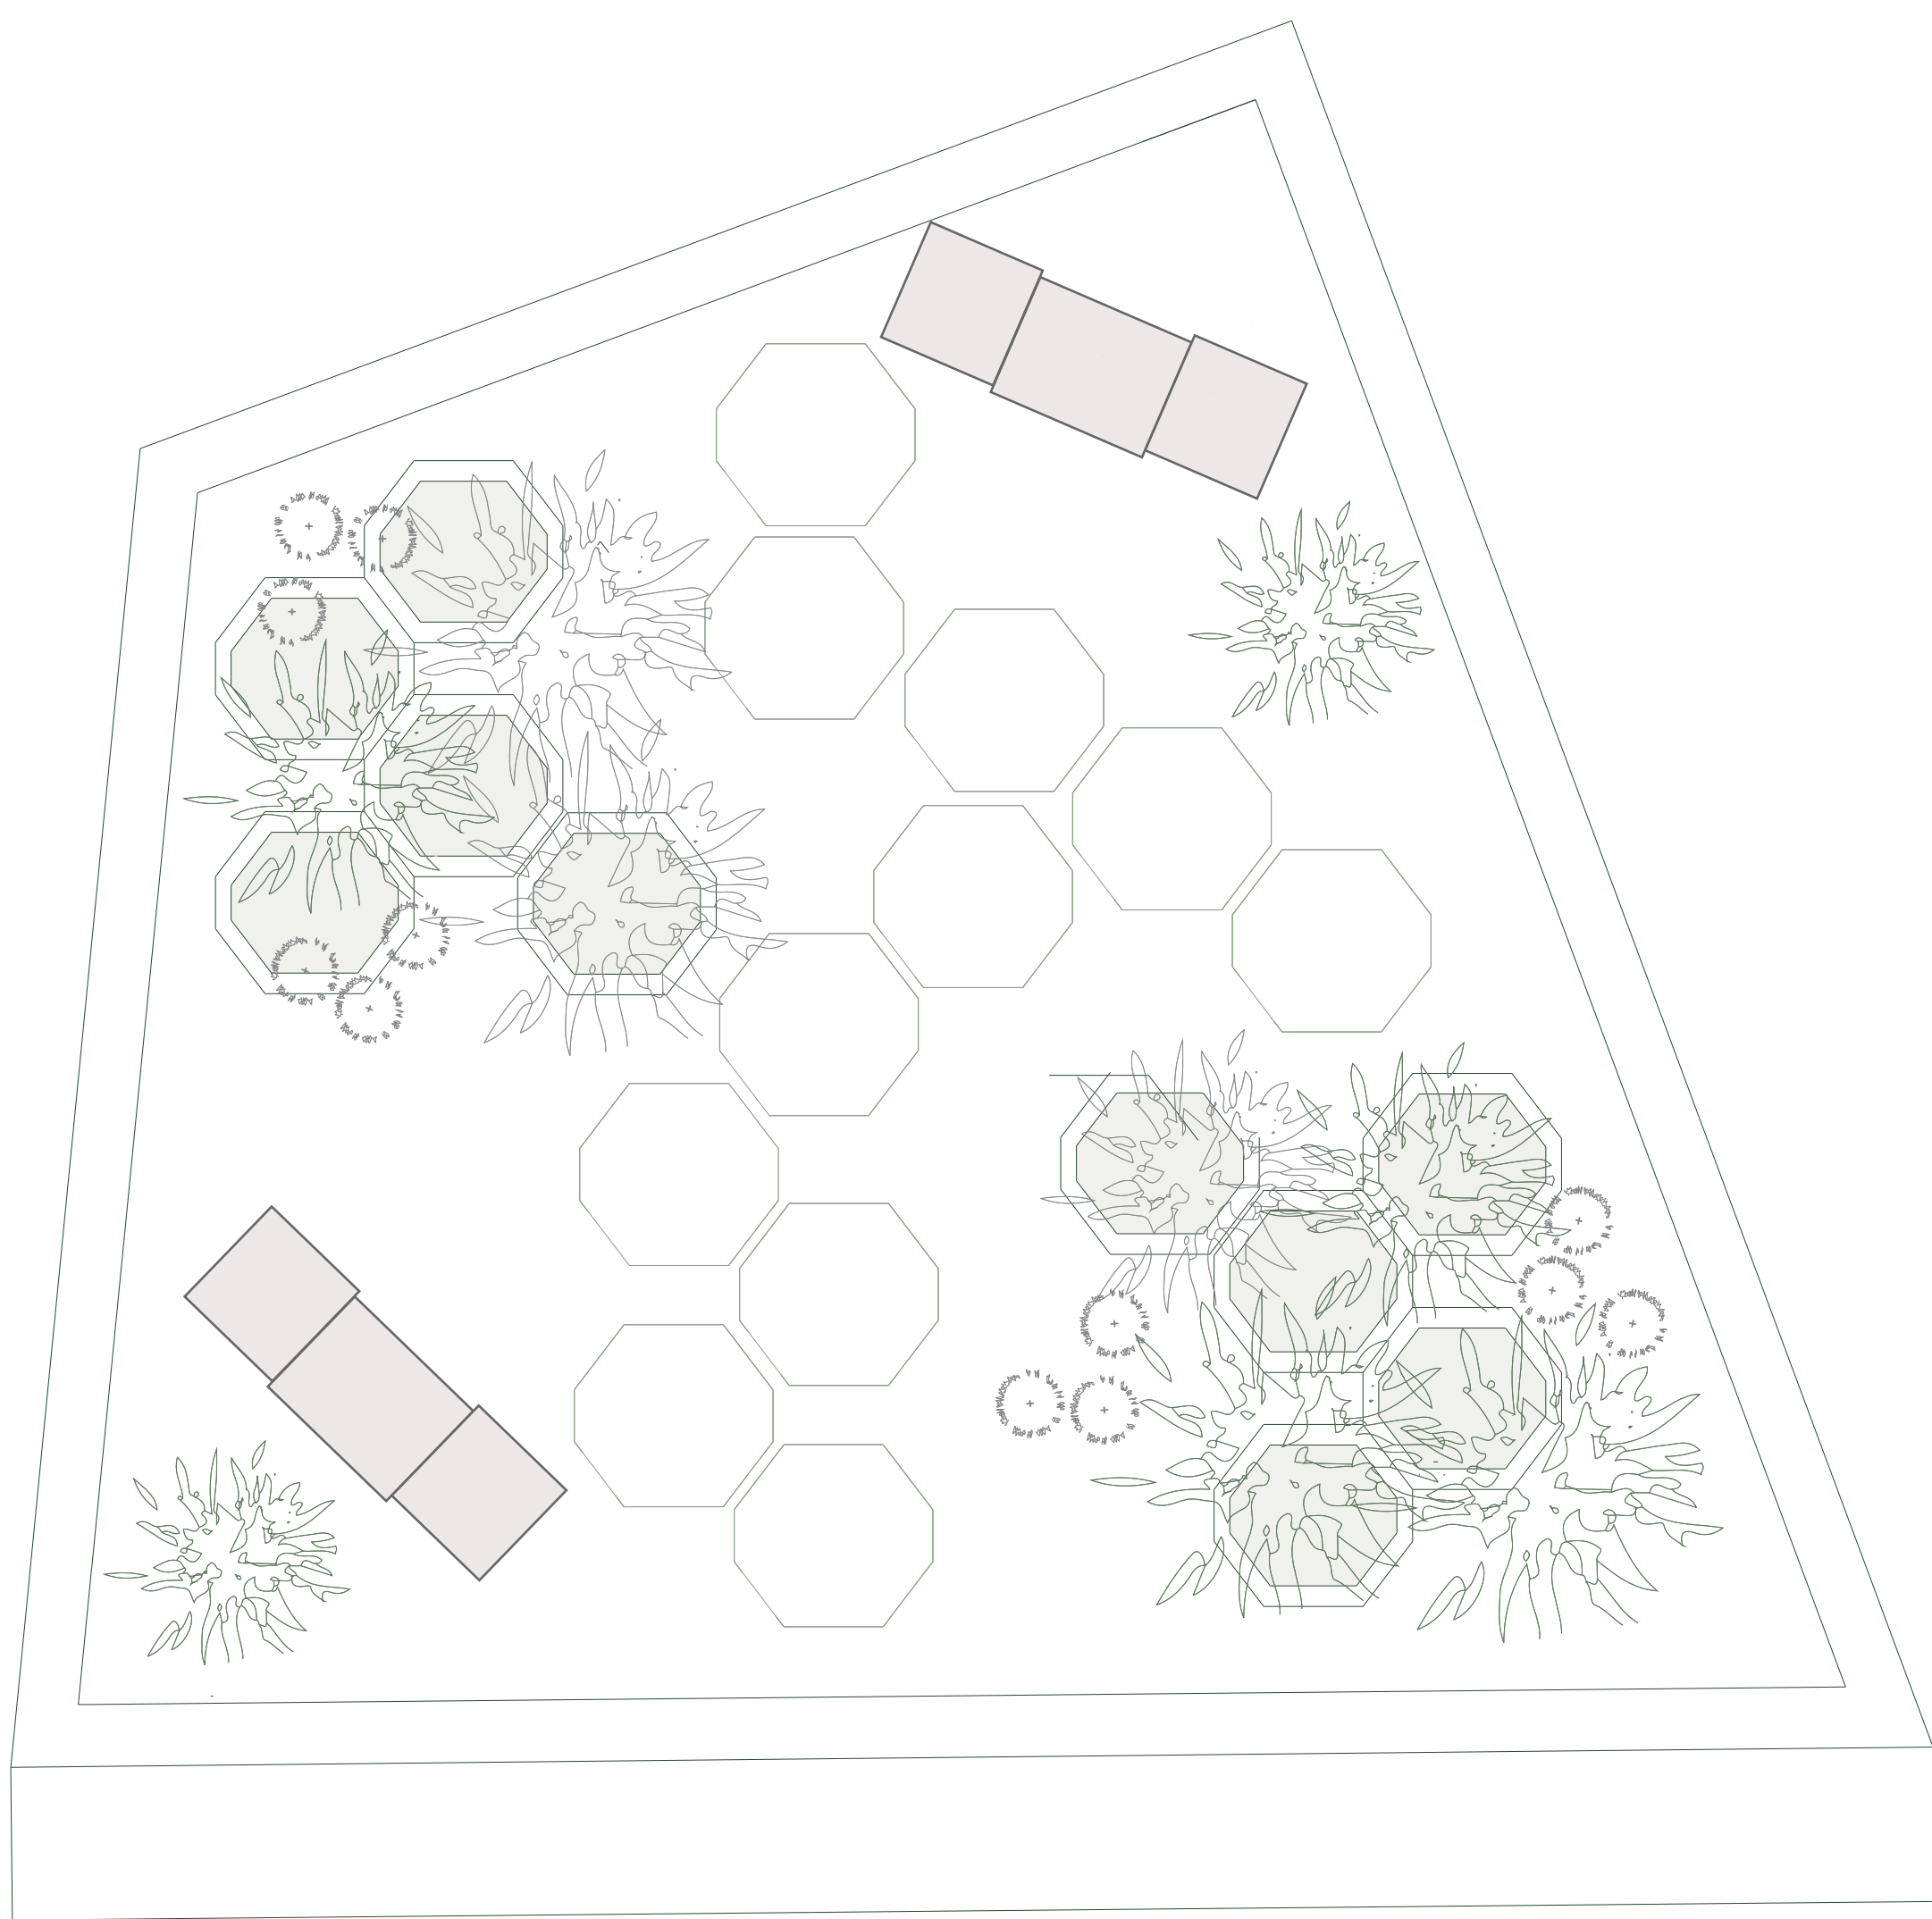

Nice to Bee is not merely a garden; it's an open classroom. Science-based educational activities invite visitors to explore the intricate relationships between plants, insects, and the environment, fostering a deeper understanding of ecological interconnectedness.

Nice to Bee becomes a harmonious extension of the ongoing efforts to restore the Pétrusse River Valley. Native plant species and landscape design mirror the principles of renaturation, creating a seamless dialogue between the garden and the natural restoration of the surrounding environment.

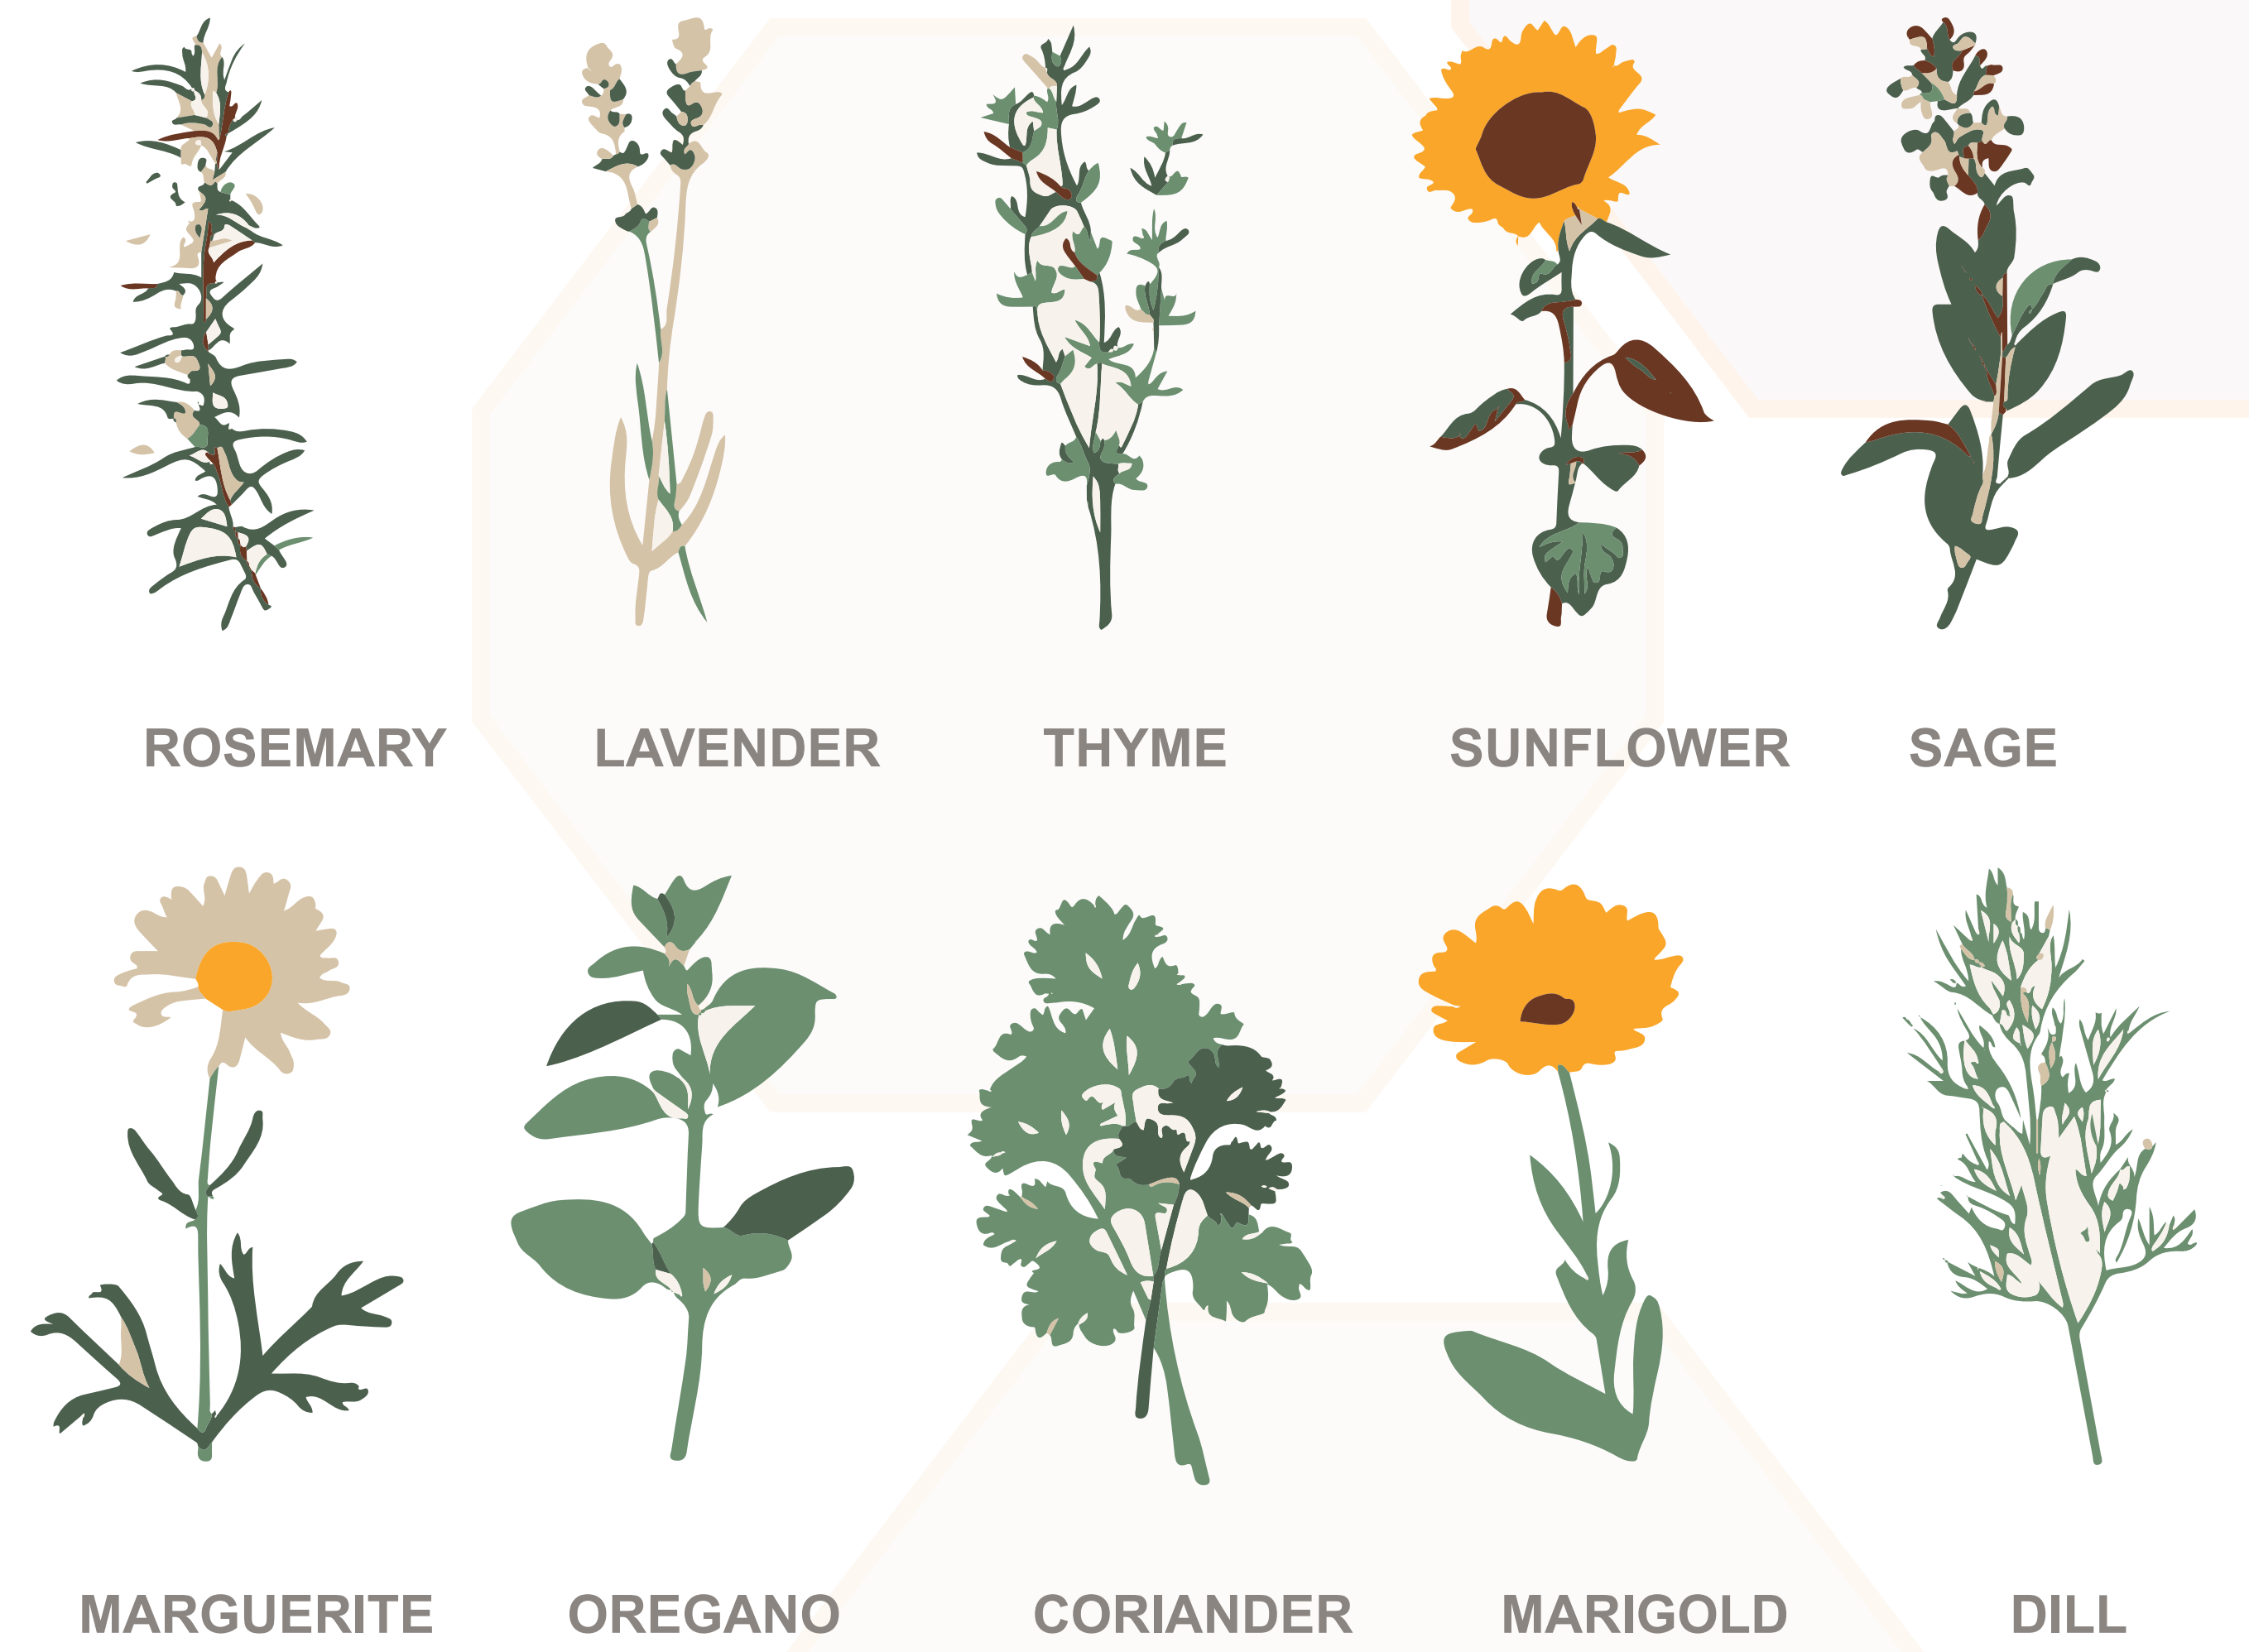

As visitors step into Nice to Bee, they embark on a sensory journey, enveloped by the hum of pollinators, vibrant blooms, and the collective spirit of responsibility. The garden serves as a microcosm of change, proving that even in small spaces, significant strides can be made towards a more sustainable and interconnected future.
